Reading

36pt

The quick brown fox

24pt

The quick brown fox jumps over the lazy dog.

18pt

Reading should feel effortless. Sky is built to disappear.

14pt

At 14px the 68% x-height keeps apertures open and counters clear.

11pt

At small sizes, spacing discipline and open apertures carry legibility further than any other decision. Sky was engineered for this.

Regular / 14pt

Sky is designed to disappear. Every aperture, every spacing decision, every curve exists for one reason: the reader should forget they are looking at a typeface. At 14px with 68% x-height, counters stay open and rhythm stays even. The letterforms take no more space than they need and give back legibility at every size from a notification badge to a full newspaper column.

What Sky is trying to be

Synthesize the three most successful sans-serifs of the last century: Helvetica's architectural neutrality and stroke discipline, Frutiger's open apertures and ergonomic warmth, and Roboto's screen-native engineering discipline. The goal is not novelty. It is a typeface resolved enough on every fundamental that it becomes the default choice — invisible, elegant, and functionally correct from a notification badge to a headline.

X-height: 68% of cap height

Sky's defining proportion. Deliberately lower than Roboto (74%) and Helvetica (71%), giving text a classical, quieter presence. Locked at 990/1456 units across all nine fonts. At this ratio, lowercase letters sit with authority without towering over caps.

Horizontal proportion

At v0.3, Sky ships 12% narrower than its Roboto foundation — measured across the full glyph set. This comes from uniform x-coordinate scaling, not letterform compression. The result places Sky between Helvetica (~73% of cap height) and the original Roboto (~97%), at approximately 85%.

Spacing philosophy

Side-bearing led, not letterform compressed. All advance widths were reduced proportionally before any outline changes. 5,901 negative side-bearing problems were corrected in v0.2, leaving zero known collision risk across the extended glyph set.

Current status

v0.3 — Foundation engineering complete. Every glyph is Roboto-derived. The next milestone (v0.5) begins hand-drawn modifications starting with O — the curve DNA that propagates to every round letter. See ROADMAP.md.
